

Introduction

Firstly, thank you very much for purchasing the VirRal script. You have, evidently, understood the power of VirRal websites. As always, I'm available to answer all your questions so feel free to email me at dave@virral.com whenever you need anything. I am not the original creator of the script (I had it outsourced) but I will do my best to answer all your questions.

Installation

- 1) First create a mysql Database for VirRal. You can do this from your hosting CPanel.
- 2) Upload the files in the "upload" folder to your server using an FTP program such as CuteFTP.
- 3) Browse to the URL of your website (or sub-folder) where you uploaded the files.
- 4) Just follow the steps online you should be up and running soon !

Customization

Customizing the script is quite hard if you have no "coding" skills. Since this script was never created to be sold we didn't bother with a nice user friendly interface. Here's a bit of "help" though.

You will find most of the files needed to change the design in the following folder:

`\system\application\views\viral\`

"header_view.php" and "footer_view.php" are obviously the header and footer of the page. Use these to modify the main design.

To modify the Main Title, Modify "head_view.php"

To modify the counter edit "counter_view.php"

Customizing the "hidden" sections (the ones for which people have to send traffic to in order to reveal them):

After you run the installation some extra files will be created:

*_view.php

*_hidden_view.php

Where * is a number corresponding to the different sections you made

The *_view.php is what the visitor sees when he hasn't yet brought enough visitors to the page.

*_hidden_view.php is what is displayed after he has reached the total amount of visitors needed for that section.
